

# System M.

## Award-winning design and technology.

---

**The modular heat pump system System M from Glen Dimplex Thermal Solutions has received two renowned international design awards: the German Design Award and the iF Design Award.**

**Kulmbach.** - The modular heat pump system System M from Glen Dimplex Thermal Solutions (GDTS) has received not one, but two awards. At a gala event in Frankfurt, managing director of the German Design Council, Andrej Kupetz, handed over the German Design Award 2018 to Henrik Rutenbeck, Chief Marketing Officer at GDTS. System M received the internationally renowned award in the "Energy" category. The "German Design Council" foundation founded in 1953 by the initiative of the German Federal Parliament issues this award to honour outstanding product design. System M triumphed against strong competition with over 2000 nominated products.

**Subject:** System M. Award-winning design and technology.  
Kulmbach, 07.02.2018

The jury explained their choice as follows: "The ultra-modern air-to-water heat pump can be configured optimally for the relevant heat consumption thanks to its modular design. The fact that the colour and material can be adapted to the aesthetics of the building and surroundings – thus cleverly concealing its technical function – makes the coherently designed System M an attractive alternative."

The second award for System M comes from the iF International Forum Design from Hanover. Here, the pioneering product from Kulmbach won this year's iF Design Award in two categories: for the overall product concept and the well thought out operator guidance that makes controlling the heat pump system extremely easy. System M impressed the 63-man independent, international expert jury with its unique combination of outstanding design and innovative technology. There were many applicants: The jury had to award the coveted quality label to products from over 6,400 entries from 54 countries. Both competitions are among the most important design prizes in the world; the iF Design Award has been running for 65 years.

"We are very proud that System M impressed the juries in these prestigious competitions", says a delighted Henrik Rutenbeck. "It was clearly the right decision to develop a heat pump that is not only radically efficient, but also radically aesthetic."

### About System M.

With an installation area of 60 x 60 centimetres, System M takes up less space than any other heat pump - no more than a washing machine. Outdoors too, outside the four walls, System M is the smallest heat pump on the market. It can also be adapted to the individual furnishing and architectural style. From real wood to fibre cement, a variety of panelling are available and all come in 1,625 RAL colours.

But System M doesn't just look good, it impresses on the inside too. Intelligent control technology ensures that heating and cooling always take place automatically and as efficiently as possible. Skilled tradesmen and installers benefit from the quick and easy commissioning. And house builders are also happy, because System M is simple and intuitive to use – whether via touch display on the device itself or via the GDTS Home App on a smartphone or tablet.

Whether for a large single-family home or a large villa – System M from GDTS offers different configurations between 4 and 16 kilowatt; also available with inverter technology on request for connectible heat output and with connections for photovoltaic or solar thermal systems.

### Glen Dimplex Thermal Solutions

Glen Dimplex  
Deutschland GmbH  
Am Goldenen Feld 18,  
95326 Kulmbach

**The Glen Dimplex Group and Glen Dimplex Thermal Solutions.**

Founded in 1973, Glen Dimplex is an international company group and a leading manufacturer of electric heating systems in the world. Glen Dimplex also occupies major market shares in the field of household appliances and solutions for cooling, heating and ventilation, as well as for using renewable energies. With the Glen Dimplex Thermal Solutions (GDTS) division, Glen Dimplex is concentrating its expertise in cooling, heating and ventilation and bundling its brands Dimplex, Riedel and Koolant Coolers under one strong roof. With the future-orientated portfolio offered by its brands and the sustainable technology, Glen Dimplex Group is perfectly prepared for the market requirements of tomorrow.
